

## TECHNICAL CHARACTERISTICS

Vegetal origin cleansing formula extracted from plants and not harmful to humans and environment.

The DEEP CLEANER will deeply detach any form of dirt or stain on smooth and synthetic leathers, as well as the sole edge of the sneakers.

Its exclusive formula eliminates all dirt effortlessly, including the most resistant such as tar.

The application of the DEEP CLEANER in no way changes the nature of the support and will restore its original shine.

Developed in collaboration with the biggest French luxury brands which were looking for an innovative, natural and truly effective product.

The DEEP CLEANER has no classification or safety labelling to provide, either for its use or for transport. (Allows airmail delivery without any special procedure or declaration of dangerous product or any particular constraint.)

## APPLICATION FIELDS

Smooth and synthetic leathers. Also suitable for cleaning the edge of the soles of your sneakers.

For fragile materials or with patterns: use the FOAM CLEANER ref. 1565.

## CARE INSTRUCTIONS

1. Brush your item to remove dust and dirt from surfaces
2. Shake the product vigorously
3. Apply the DEEP CLEANER to the dirty areas of your sneakers using the SPATULE brush ref. 2671 or the TECHNICAL CLEANING RAG special sneakers Ref. 2505.
4. Brush or rub the support to remove dirt.
5. Wipe the support using the TECHNICAL CLEANING RAG special sneakers, clean and not impregnated with product, in order to remove the last residues and dry the support.
6. Repeat steps 4 and 5 if necessary.

**ADVICES**

It is important to do a test beforehand on a hidden part.

Regarding the wide variety of printing types and colours, we recommend you to do a discreet test on the coloured, painted or printed parts.

When applying the DEEP CLEANER, it is necessary to use the appropriate brush from the Saphir range or the TECHNICAL CLEANING CLOTH Médaille D'or while ensuring the cleanliness of the brush or the tissue during each new application, this in order not to dirt again the support.

Remember to clean all the parts of the same colour or the same material of your Sneakers, in order to standardize the appearance and the surface.

You can then apply the products from the Médaille D'or range and use PROTECTOR ref. 1735 to protect your sneakers and prevent them from re-smearing.

Some leathers or materials may after application of DEEP CLEANER give the impression of darkening slightly. This is normal because the non-aggressive composition of the product and its reviving action can, in some cases, produce this effect.

The natural and non-aggressive formula of the DEEP CLEANER will allow the support to regain its original appearance and texture after several hours.
